

What is claimed is:

- 5 1. An optical waveguide module in which transmitted signal light emitted from a laser light-emitting element passes through a first optical waveguide and a second optical waveguide to strike a transmitting/receiving medium such as an optical fiber, and a signal light from said transmitting/receiving medium passes through said second optical waveguide and is received by a light-receiving element, said optical waveguide module comprising:
- 10 a first light-blocking resin covering part, which covers a light-emitting coupling part coupling said laser light-emitting element and said first optical waveguide, and
- 15 a second light-block resin covering part, which covers a light-receiving coupling part coupling said light-receiving element and said second optical waveguide.
2. An optical waveguide module according to claim 1, wherein said first and second light-blocking resin covering parts comprise a characteristic of either absorbing or reflecting light incident thereto.
- 20 3. An optical waveguide module according to claim 1, wherein said light-emitting coupling part and said light-receiving coupling part is filled with a transparent resin.
- 25 4. An optical waveguide module according to claim 1, wherein said first light-blocking resin covering part covers a monitoring light-receiving element disposed at the rear part of said laser light-emitting element and a monitoring light coupling part coupling said laser light-emitting element and said monitoring light-receiving element.
5. An optical waveguide module in which transmitted

signal light emitted from a laser light-emitting element passes through a first optical waveguide and a second optical waveguide to strike a transmitting/receiving medium such as an optical fiber, and a signal light from said transmitting/receiving medium passes through said second optical waveguide and is received by a light-receiving element, said optical waveguide module comprising:

5 a light-blocking plate, disposed above said first optical waveguide, which blocks transmitted signal light  
10 missing said light-emitting coupling part coupling said laser light-emitting element and said first optical waveguide.

6. An optical waveguide module according to claim 5, wherein said light-blocking plate comprises a characteristic of either absorbing or reflecting light incident thereto.
